
Number: CSB-160405-1
Released: 5th April 2016
Modified:
Subject: FortiManager Potential Memory Leak Results in Policy Package Installation Failure
Product: FortiManager

Description:

A FortiManager running 5.2.6 may exhibit a memory leak that may result in an installation failure of a large policy package. The success rate depends on systems memory usage status as well as the policy package complexity.

For example, a FortiManager 1000D with a policy package of 1000 policies, each containing 10 source/destination addresses, 10 services from 500 address pools, and 50 dynamic interface pools, had a successful installation rate of 60%.

Possibly Affected Products:

FortiManager 5.2.6

Remedy:

FortiManager 5.2.7, scheduled for release on April 8th, 2016

Workaround:

You can increase the installation success rate by reducing the number of devices to which you install policy packages.
